

Important Home Preparations

In order for us to produce the best video possible, we need your help preparing the home so it looks great in your video. Therefore, below you will find a list of suggested, yet important and impactful, preparations for you to make to the home before we arrive. These suggested next steps will make a huge difference in the quality of your real estate drone video. We very much appreciate your help and cooperation in getting these done prior to our arrival. Thank you for the opportunity to work with you.

Outside

1. Remove all vehicles from the driveway.
2. Water all vegetation the night or morning before our scheduled shoot.
3. Remove any pets or animals (they look really weird moving backwards when footage is reversed in edit).
4. Turn on all lights (accent, porch, deck, landscaping, driveway, etc.).
5. Remove any children's toys or loose articles placed around the yard.
6. Wipe down any outdoor furniture.
7. Remove any construction materials from the yard (tarps, bricks, concrete blocks, wood, etc.).
8. We highly recommend cleaning the windows (especially if you've scheduled a sunset shoot).

Inside

1. Thoroughly vacuum and dust
2. Turn on all lights (under cabinets, vent hood, general interior, closets, bathrooms, recessed cans, accent, sconces, chandelier, lamps, book shelves, etc.). The more lighting the better.
3. Leave the blinds open.
4. Wipe off the countertops and put away "loose" items (like mixers and coffee makers).
